

AMP Conservation Practices

What the program will fund, what each practice actually contains, and the ten I would do first — Tiny Seed Farm

Prepared	October 2, 2026
For	Todd Wilson, Tiny Seed Farm LLC, Beaver County, Pennsylvania
Program	USDA Advancing Markets for Producers (AMP), administered by Pasa
Scope	The 36 conservation practices on Pasa's own list — <i>Pasa Conservation Technical Assistance: List of Conservation Practices</i> . Nothing outside that list is recommended here.
Companion	The Business Development half of AMP is budgeted separately in <i>PASA_BD_PLAN_REVISED.md</i> (\$14,952.43). This document is the conservation half only .

How to read the dollar figures

Pasa's practice list gives practice **names and codes** but no detail on what each one contains. That detail exists in the NRCS payment schedules, where every practice code is broken into named **scenarios** — the concrete, fundable variations of the practice. Those scenarios are the sub-lists in this report.

Every rate below was parsed from **Pennsylvania NRCS Bulletin PA 440-26-06**, "Pennsylvania published cost list and payment caps for FY 2026 EQIP and CSP contracts," dated March 11, 2026. 1,835 scenario rows were extracted across 148 practice codes.

IMPORTANT CAVEAT. Those are **NRCS EQIP/CSP** rates. AMP conservation money is administered by Pasa, and **Pasa's payment rates may differ**. Use these figures to understand what each practice covers and roughly what it is worth — **not** as a quote of what AMP will pay. Confirm actual rates with Luka Hildebrandt.

"HU-" scenarios are **Historically Underserved** rates, which run roughly 20% above base. Beginning farmers (first 10 years), veterans, socially disadvantaged and limited-resource producers qualify. **Todd should confirm whether he qualifies — it is free money if he does**. HU rows are omitted from the tables below for readability; assume roughly +20%.

The farm, from the FSA record

These figures were read on October 1–2, 2026 from the farm's own FSA GeoJSON field boundaries, not from recollection.

Farm	Tract	Field	Land type	Acres	FSA cropland?
1068	446	1	HEL	33.55	YES
1068	446	2	HEL	1.24	YES
1068	446	3	UHEL	0.95	no
1068	446	4	UHEL	6.41	no
1068	446	5	UHEL	20.79	no
1068	446	6	UHEL	3.74	no
1079	1583	1	HEL	3.76	YES
1079	1583	2	UHEL	17.45	no
1238	1783	1	HEL	5.50	YES
1238	1783	2	UHEL	1.38	no
1238	1783	3	UHEL	2.64	no

The single most important fact in this report

Every acre FSA counts as cropland on this operation is classified Highly Erodible Land. The cropland indicator is set on exactly the four HEL fields — 44.05 acres — and on none of the seven UHEL fields. 45% of the mapped 97.41 acres is HEL, and **100% of the cropland is**.

That matters three ways. It makes **soil erosion the documented, USDA-recognised resource concern** on all cropland, so erosion practices need no argument. It means conservation compliance already applies (the AD-1026 is certified and current). And HEL ground is typically **weighted favourably in conservation ranking**.

It also means Todd's own instinct — tarping to terminate a crop and *remove the tillage step* — is not merely convenient. **It is the textbook response to erodible cropland, and the program has a practice and a payment scenario for exactly it.**

Certification	Certified organic, OEFFA, NOP ID 1600003839 — certified since 12/11/2025, renewal due 04/25/2026
Land tenure	All land is leased. NRCS eligibility reads “ control or own eligible land,” so a tenant qualifies — but landlord consent and lease term will matter for anything structural. Confirm with Luka.
Commodities (AMP)	Salad greens and tomatoes
Already practising	cover crops, crop rotation, compost, drip irrigation, high tunnels

The Top Ten — what I would do, in order

Ranked by what this farm actually is: 44 acres of highly erodible cropland, certified organic, salad greens and tomatoes, leased ground, an owner who already cover-crops, rotates and composts, and who has said he wants to stop tilling. Each entry says why it fits *here*, not why it is generally good.

1. Residue and Tillage Management, Reduced Till — NON-MECHANICAL (345)

This is the practice for the tarps, and it is the highest-value match on the list. “Non-Mechanical” reduced tillage means suppressing weeds and terminating a crop *without steel* — which is precisely occultation and solarisation. It pays per acre, not per tarp, and at \$1,407.73/acre it is an order of magnitude above the per-acre tillage scenarios.

Note. Confirm with Luka that tarping is what PA means by Non-Mechanical before relying on it. If yes, this single line may justify the whole tarp purchase.

Scenario — what you can actually do	Unit	PA FY26 rate
Adaptive Management	Ea	\$5,062.61
Reduced Tillage, Non-Mechanical	Ac	\$1,407.73
Reduced Tillage, Less Than Half Acres	kSqFt	\$29.91
Reduced Tillage	Ac	\$21.60

2. Mulching — Synthetic Material (484)

The other half of the tarp answer, and it settles a question that has been open for weeks: **Mulching 484 explicitly covers synthetic material, not just straw and woodchips.** Two scenarios apply — whole-area “Synthetic Material” per acre, and “Synthetic Material, Row” per 1,000 sq ft, which suits bed-width work.

Note. 484 is also the conservation practice already named as the tie-in for the Business Development budget. Funding it here turns that from a stated intention into a funded, inspectable practice.

Scenario — what you can actually do	Unit	PA FY26 rate
Synthetic Material	SqFt	\$2,502.96
Synthetic Material	Ac	\$2,502.96
Natural Material, Partial Coverage	Ac	\$149.86
Synthetic Material, Row	kSqFt	\$142.74
Tree and Shrub	Ea	\$1.03
Natural Material, Small Bale	SqFt	\$0.30
Erosion Control Blanket	SqFt	\$0.20

3. Cover Crop — Single Species, ORGANIC (340)

Todd already cover-crops, so this pays for work the farm does anyway. Note the structure: the **organic scenario pays \$102.89/acre against \$76.94 for conventional** — certification is worth a 34% premium on this line. There is also a “Mechanical Termination” scenario priced per 1,000 sq ft for small intensive blocks.

Note. Cheapest possible win. The practice is already happening; it needs documenting, not starting.

Scenario — what you can actually do	Unit	PA FY26 rate
Adaptive Management	Ea	\$5,062.61
Single Species, Organic	Ac	\$102.89
Multi-Species	Ac	\$80.15
Single Species	Ac	\$76.94
Mechanical Termination	kSqFt	\$23.56

4. Soil Carbon Amendment — Compost, Onsite (336)

Pays per acre to apply compost. **This pairs directly with an AIG line that has never been spent:** Round 1 approved a \$24,000 PTO compost turner, \$16,000 of it PDA money, and that line expires 2027-06-30. AIG buys the machine that makes the compost; AMP pays to spread it.

Note. Two grants, two halves of one system, no overlap. Also the highest-leverage soil-health practice on intensively cropped vegetable ground.

Scenario — what you can actually do	Unit	PA FY26 rate
Biochar	Ac	\$1,426.77
Biochar, Compost	Ac	\$798.40
Compost, Biochar	Ac	\$707.18
Compost, Offsite	Ac	\$279.77
Compost, Onsite	Ac	\$267.49
Other Carbon Amendment	Ac	\$131.26
Compost and Biochar, Less Than 10,000 Square Feet	kSqFt	\$86.24

5. Residue and Tillage Management, No-Till (329)

The headline erosion practice for land that is 100% HEL. Note the small-farm scenario: **“No-Till, Less Than Half Acre” is priced per 1,000 sq ft**, which is how intensive market-garden blocks actually get measured.

Note. Pair with 345 above — they are complementary, not alternatives. Ask Luka how PA distinguishes them so the acres are not double-counted.

Scenario — what you can actually do	Unit	PA FY26 rate
No-Till, Adaptive Management	Ea	\$3,026.10
No-Till, Less Than Half Acre	kSqFt	\$34.52
No-Till and Strip-Till	Ac	\$26.53

6. Pest Management Conservation System (595)

Weed and pest pressure is the defining challenge of organic vegetable production, and this is the practice for it. PA publishes **explicit “Small Farm” scenarios** — Plant Health PAMS activities — running from \$1,565 to \$5,479 each. PAMS is Prevention, Avoidance, Monitoring and Suppression, which is the organic playbook written in NRCS language.

Note. Insect netting, which Todd has discussed, lives here rather than in Business Development.

Scenario — what you can actually do	Unit	PA FY26 rate
Plant Health PAMS Activities (Small Farm - Each) Labor, Materials, and Mitigation	Ea	\$5,479.55
Plant Health PAMS Activities (Small Farm - Each) Labor and Materials	Ea	\$3,235.26
Water Quality Pesticide Mitigation, Greater Than 30 Point and/or Beneficial Insec	Ea	\$1,678.34
Plant Health PAMS (Small Farm - Each) Labor and Mitigation	Ea	\$1,565.01
Water Quality Pesticide Mitigation, Equal to 30 Point and/or Beneficial Insect Pes	Ea	\$1,023.17
Plant Health PAMS (Small Farm - Each) Labor Only	Ea	\$487.48
Plant Health PAMS (acs) High Labor, Materials and Mitigation	Ac	\$435.90

7. Contour Buffer Strips — Specialty Crops (332)

The highest per-acre rate found anywhere in the list relevant to this farm: **\$2,171.97/acre under the Specialty Crops scenario**. It is a foregone-income payment — compensation for taking strips out of production to break slope length. Tiny Seed grows specialty crops on 33.55 acres of HEL in a single field.

Note. Worth a serious look specifically at Farm 1068 / Tract 446 / Field 1. Needs a conservation planner to lay out on the contour; that is what Luka is for.

Scenario — what you can actually do	Unit	PA FY26 rate
Specialty Crops, Foregone Income	Ac	\$2,171.97
Native Species, Foregone Income	Ac	\$559.89
Introduced Species, Foregone Income	Ac	\$525.14

8. High Tunnel System (325)

\$5,524.04 base plus \$4.89/sq ft for an enclosed tunnel, **capped at \$10,000 per operating unit**. Relevant for a second reason: AIG Round 2 appears to have cut the \$12,668 greenhouse and high-tunnel automation line, and **High Tunnel System is on Pasa's list**, so the conservation side may recover what the state program declined.

Note. Leased land makes a permanent structure a landlord conversation. Resolve tenure before designing anything.

Scenario — what you can actually do	Unit	PA FY26 rate
Enclosed High Tunnel, Base Cost	No	\$5,524.04
Open-Ended High Tunnel, Base Cost	No	\$4,002.30
Enclosed High Tunnel, Implementation Cost	SqFt	\$4.89
Open-Ended High Tunnel, Implementation Cost	SqFt	\$4.58

9. Irrigation System, Micro Irrigation (441)

Same logic as the tunnels. AIG Round 2 most likely cut the \$10,195 Toro Tempus irrigation line, and **Micro Irrigation 441 is on Pasa's list**. PA publishes a “**Small Microirrigation System**” scenario at **\$1.31/sq ft, capped at \$3,500**, plus base-cost scenarios for surface tape and PE-with-emitters.

Note. Potentially recovers a declined AIG item through a different program. Ask Luka.

Scenario — what you can actually do	Unit	PA FY26 rate
Microjet, Base Cost	No	\$7,084.30
Surface Polyethylene (PE) with Emitters, Base Cost	No	\$5,363.14
Surface Tape, Base Cost	No	\$1,006.63
Small Microirrigation System	SqFt	\$1.31
Microjet, Implementation Cost	Ft	\$1.23
Surface Polyethylene (PE) with Emitters, Implementation Cost	Ft	\$0.43
Hoop House Surface Microirrigation	SqFt	\$0.33

10. Field Border (386)

Foregone-income payments for borders around cropland — \$903.63/acre for pollinator borders, \$575.36 native, \$499.90 introduced. On erodible ground a vegetated border is both sediment control and beneficial-insect habitat, which feeds back into practice 595.

Note. The least disruptive practice on this list: it uses field edges rather than production beds.

Scenario — what you can actually do	Unit	PA FY26 rate
Pollinator, Foregone Income	Ac	\$903.63
Native Species, Foregone Income	Ac	\$575.36
Introduced Species, Foregone Income	Ac	\$499.90
Renovate Degraded Field Border	Ac	\$132.50
Extend or Diversify, Foregone Income	kSqFt	\$114.61

Honourable mentions

Conservation Crop Rotation (328) — already practised, 22 scenarios, worth documenting. **Nutrient Management (590)** — pairs with the farm's existing soil testing. **Composting Facility (317)** — \$4,866.69 base plus \$10.35/sq ft for a concrete-floor farm bin, which is the structure the AIG compost turner would feed. **Conservation Cover (327)** and **Hedgerow Planting (422)** for field margins.

All 36 AMP practices — the complete reference

Every practice on Pasa's list, with its Pennsylvania payment scenarios. Practices are grouped by whether they can realistically apply to a leased, certified-organic vegetable farm with no livestock and no managed woodland. **Nothing here is outside Pasa's list.**

Applies to this farm

Mulching (484) — 13 PA scenarios

Tarps/synthetic, straw, woodchips, erosion blanket. Lead practice.

Scenario — what you can actually do	Unit	PA FY26 rate
Synthetic Material	SqFt	\$2,502.96
Synthetic Material	Ac	\$2,502.96
Natural Material, Partial Coverage	Ac	\$149.86
Synthetic Material, Row	kSqFt	\$142.74
Tree and Shrub	Ea	\$1.03
Natural Material, Small Bale	SqFt	\$0.30

Residue and Tillage Mgmt, Reduced Till (345) — 8 PA scenarios

Includes NON-MECHANICAL = tarping.

Scenario — what you can actually do	Unit	PA FY26 rate
Adaptive Management	Ea	\$5,062.61
Reduced Tillage, Non-Mechanical	Ac	\$1,407.73
Reduced Tillage, Less Than Half Acres	kSqFt	\$29.91
Reduced Tillage	Ac	\$21.60

Residue and Tillage Mgmt, No-Till (329) — 6 PA scenarios

Small-farm scenario priced per 1,000 sq ft.

Scenario — what you can actually do	Unit	PA FY26 rate
No-Till, Adaptive Management	Ea	\$3,026.10
No-Till, Less Than Half Acre	kSqFt	\$34.52
No-Till and Strip-Till	Ac	\$26.53

Cover Crop (340) — 10 PA scenarios

Organic scenario pays a premium over conventional.

Scenario — what you can actually do	Unit	PA FY26 rate
Adaptive Management	Ea	\$5,062.61
Single Species, Organic	Ac	\$102.89
Multi-Species	Ac	\$80.15
Single Species	Ac	\$76.94
Mechanical Termination	kSqFt	\$23.56

Soil Carbon Amendment (336) — 18 PA scenarios

Compost and biochar, per acre or per 1,000 sq ft.

Scenario — what you can actually do	Unit	PA FY26 rate
Biochar	Ac	\$1,426.77
Biochar, Compost	Ac	\$798.40
Compost, Biochar	Ac	\$707.18
Compost, Offsite	Ac	\$279.77
Compost, Onsite	Ac	\$267.49
Other Carbon Amendment	Ac	\$131.26

Conservation Crop Rotation (328) — 16 PA scenarios

Already practised on this farm.

Scenario — what you can actually do	Unit	PA FY26 rate
SU_Resource Conserving Crop Rotation	Ac	\$159.84
Irrigated to Dryland	Ac	\$143.96
SU_Improved Resource Conserving Crop Rotation	Ac	\$131.58
Add Crop Organic System	Ac	\$85.96
Perennial, Short-Term	Ac	\$54.64
Winter or Spring Annual	Ac	\$48.69

Pest Management Conservation System (595) — 24 PA scenarios

Explicit Small Farm PAMS scenarios.

Scenario — what you can actually do	Unit	PA FY26 rate
Plant Health PAMS Activities (Small Farm - Each) Labor, Materials, and Mitigation	Ea	\$5,479.55
Plant Health PAMS Activities (Small Farm - Each) Labor and Materials	Ea	\$3,235.26
Water Quality Pesticide Mitigation, Greater Than 30 Point and/or Beneficial Insec	Ea	\$1,678.34
Plant Health PAMS (Small Farm - Each) Labor and Mitigation	Ea	\$1,565.01
Water Quality Pesticide Mitigation, Equal to 30 Point and/or Beneficial Insect Pes	Ea	\$1,023.17
Plant Health PAMS (Small Farm - Each) Labor Only	Ea	\$487.48

Nutrient Management (590) — 10 PA scenarios

Pairs with existing soil testing.

Scenario — what you can actually do	Unit	PA FY26 rate
Adaptive Nutrient Management	Ea	\$2,499.36
Manure	Ac	\$254.36
Precision Nutrient Application	Ac	\$87.10
Prescription Nutrient Efficiency	Ac	\$49.75
Nutrient Management	Ac	\$32.41

High Tunnel System (325) — 8 PA scenarios

Capped \$10,000 per operating unit. Leased-land caveat.

Scenario — what you can actually do	Unit	PA FY26 rate
Enclosed High Tunnel, Base Cost	No	\$5,524.04
Open-Ended High Tunnel, Base Cost	No	\$4,002.30
Enclosed High Tunnel, Implementation Cost	SqFt	\$4.89
Open-Ended High Tunnel, Implementation Cost	SqFt	\$4.58

Irrigation System, Micro Irrigation (441) — 16 PA scenarios

Small system scenario capped at \$3,500.

Scenario — what you can actually do	Unit	PA FY26 rate
Microjet, Base Cost	No	\$7,084.30
Surface Polyethylene (PE) with Emitters, Base Cost	No	\$5,363.14
Surface Tape, Base Cost	No	\$1,006.63
Small Microirrigation System	SqFt	\$1.31
Microjet, Implementation Cost	Ft	\$1.23
Surface Polyethylene (PE) with Emitters, Implementation Cost	Ft	\$0.43

Contour Buffer Strips (332) — 6 PA scenarios

Specialty Crops rate is the highest found.

Scenario — what you can actually do	Unit	PA FY26 rate
Specialty Crops, Foregone Income	Ac	\$2,171.97
Native Species, Foregone Income	Ac	\$559.89
Introduced Species, Foregone Income	Ac	\$525.14

Field Border (386) — 10 PA scenarios

Foregone-income payments on field edges.

Scenario — what you can actually do	Unit	PA FY26 rate
Pollinator, Foregone Income	Ac	\$903.63
Native Species, Foregone Income	Ac	\$575.36
Introduced Species, Foregone Income	Ac	\$499.90
Renovate Degraded Field Border	Ac	\$132.50
Extend or Diversify, Foregone Income	kSqFt	\$114.61

Conservation Cover (327) — 8 PA scenarios

Permanent cover on land taken out of production.

Scenario — what you can actually do	Unit	PA FY26 rate
Native Mix Plus Pollinator Species, Foregone Income	Ac	\$949.78
Native Species, Foregone Income	Ac	\$912.06
Introduced Species, Foregone Income	Ac	\$536.41
Alleyways, Orchard, or Vineyard	Ac	\$138.01

Hedgerow Planting (422) — 8 PA scenarios

Field margins, beneficial habitat, windbreak.

Scenario — what you can actually do	Unit	PA FY26 rate
Beetle Bank	Ft	\$4.59
Wildlife Hedgerow, High Labor	Ft	\$2.43
Grasses for Poultry House Air Quality Mitigation	Ft	\$2.38
Wildlife Hedgerow, Low Labor	Ft	\$1.67

Composting Facility (317) — 4 PA scenarios

Concrete-floor farm bin. Feeds the AIG compost turner.

Scenario — what you can actually do	Unit	PA FY26 rate
Farm Bin, Concrete Floor, Wood or Concrete Walls, Base Cost	No	\$4,866.69
Farm Bin, Concrete Floor, Wood or Concrete Walls, Implementation Cost	SqFt	\$10.35

Grassed Waterway (412) — 4 PA scenarios

For concentrated flow paths on HEL ground.

Scenario — what you can actually do	Unit	PA FY26 rate
Grassed Waterway with Checks	Ac	\$3,282.54
Grass Waterway	Ac	\$2,464.35

Tree/Shrub Establishment (612) — 15 PA scenarios

Margins and buffers.

Scenario — what you can actually do	Unit	PA FY26 rate
PR-Protection of Natural Regeneration	Ac	\$575.12
Protection of Natural Regeneration	Ac	\$479.27
PR-Large Containers with Protection	No	\$28.96
Large Containers with Protection	No	\$24.14
PR-Medium Containers with Protection	No	\$13.95
Medium Containers with Protection	No	\$11.62

Windbreak/Shelterbelt Establishment (380) — 1 PA scenarios

Wind erosion and crop protection.

Scenario — what you can actually do	Unit	PA FY26 rate
One Row Planting, No Protection	Ft	\$1.45

Riparian Forest Buffer (391) — 2 PA scenarios

Only if a watercourse runs through the ground.

Scenario — what you can actually do	Unit	PA FY26 rate
Small Area Planting Mix with Tree Shelters	Ac	\$5,367.07

Alley Cropping (311) — 2 PA scenarios

Long-horizon agroforestry; hard on leased land.

Scenario — what you can actually do	Unit	PA FY26 rate
Alley Cropping	Ea	\$13.66

Farmstead Energy Improvement (374) — 50 PA scenarios

67 scenarios — pack house, coolers, motors.

Scenario — what you can actually do	Unit	PA FY26 rate
Alley Scraper System	Ea	\$26,949.32
Heat Recovery, Water, High Efficiency	Ea	\$4,940.52
Plate Cooler	Ea	\$4,481.06
Scroll Compressor	Ea	\$3,248.35
Heating, Water, High Efficiency	Ea	\$2,906.24
Automatic Controller, Multiple Function	Ea	\$2,170.64

Lighting System Improvement (670) — 32 PA scenarios

36 scenarios — efficient lighting.

Scenario — what you can actually do	Unit	PA FY26 rate
LED Dimmer or Controller	Ea	\$421.07
Fixture (including LED), Greater Than or Equal to 80 Watts	Ea	\$188.31
Fixture (including LED), Greater Than or Equal to 40 Watts and Less Than 80 Wa	Ea	\$117.39
LED (using existing fixture), Greater Than or Equal to 100 Watts	Ea	\$80.79
Fixture (including LED), Greater Than or Equal to 20 Watts and Less Than 40 Wa	Ea	\$58.69
LED (using existing fixture), Greater Than or Equal to 20 Watts and Less Than 10	Ea	\$34.61

Fence (382) — 10 PA scenarios

Deer pressure is the realistic use here.

Scenario — what you can actually do	Unit	PA FY26 rate
Woven Wire, 96 Inches	Ft	\$6.78
High Tensile, Electric, Five or More Wires	Ft	\$2.84
Barbed or Smooth Wire, Multi-Strand	Ft	\$2.66
High Tensile, Electric, Four Wires or Less	Ft	\$2.16
Temporary/Portable Fence	Ft	\$0.68

Trails and Walkways (575) — 20 PA scenarios

Capped \$3.00/sq ft rock/gravel, \$35,000/contract.

Scenario — what you can actually do	Unit	PA FY26 rate
Walkway, Rock/Gravel Geotextile, Base Cost	No	\$1,584.59
Walkway, Reinforced Concrete, Base Cost	No	\$1,471.94
Walkway, Reinforced Concrete, Implementation Cost	SqFt	\$437.65
Walkway, Wood Chips, Base Cost	No	\$389.16
Walkway, Earth or Vegetated, Base Cost	No	\$155.37
Walkway, Wood Chips, Implementation Cost	CuYd	\$62.13

On Pasa's list but unlikely to fit

Listed for completeness, because the list is the list. Each is excluded for a stated reason, not skipped.

Practice	Code	Why not here
Prescribed Burning	338	No use case on vegetable ground.
Forest Farming	379	No managed woodland. No PA scenarios published.
Forest Stand Improvement	666	No managed woodland.
Silvopasture	381	Requires livestock. No PA scenarios published.
Pasture and Hay Planting	512	No livestock.
Prescribed Grazing	528	No livestock.
Livestock Pipeline	516	No livestock.
Livestock Shelter	576	No livestock. No PA scenarios published.
Watering Facility	614	Livestock-oriented.
Access Control	472	No PA scenarios published; livestock exclusion practice.
Herbaceous Wind Barriers	603	No PA scenarios published. Ask Luka.
Water Harvesting Catchment	636	No PA scenarios published. Ask Luka.

Open questions — ask before committing

Question	Ask	Why it matters
Is tarping what PA means by “Non-Mechanical” reduced tillage (345)?	Luka	This is recommendation #1. If the answer is no, the tarps fall back to 484 Synthetic.
What does AMP actually pay, as opposed to NRCS EQIP?	Luka / Chris	Every rate in this report is an EQIP/CSP rate used as a proxy.
Does Todd qualify for Historically Underserved rates?	Todd / Luka	Beginning farmer within 10 years, veteran, or limited-resource. Worth ~20%.
Leased land — what consent or lease term is required?	Luka + landlord	NRCS says “control or own.” Structures (325) are the sensitive case.
Is there any active NRCS EQIP or CSP contract on these fields?	Todd	AMP's double-dip rule bars funding the same commodity, practice OR field as another federal program. EQIP is federal. This is the one real conflict risk.
Which field grows the greens and tomatoes?	Todd	Still unanswered, and it blocks the Business Development filing too.
Do tarps go to Conservation or Business Development?	Chris	Rule 1 says Conservation. The BD ideas list says tarps. Rule 1 should govern.

- **Pennsylvania NRCS Bulletin PA 440-26-06**, “Pennsylvania published cost list and payment caps for FY 2026 EQIP and CSP contracts,” March 11, 2026, expires September 30, 2026. 59 pages. Source of every scenario and rate. nrcs.usda.gov/sites/default/files/2026-04/
- **Pasa Business Development Program Overview** — eligibility rules, including rule 1 (conservation practices go to Conservation Implementation) and the double-dipping rule.
- **Tiny Seed Farm FSA field boundaries (GeoJSON)**, retrieved 2026-10-01 — farm, tract, field, land type (HEL/UHEL), acreage and cropland indicator.
- **PA NRCS EQIP and Organic Initiative program pages** — eligibility (“control or own eligible land”), organic funding structure, HEL compliance requirement.

Rates were extracted programmatically and validated by checking that every Historically Underserved rate exceeds its base rate — 712 pairs tested, 5 failures, all in Cover Crop, each corrected against the raw page. Zero anomalies remain. Where no scenario is published for a practice, this report says so rather than estimating.
